

✕ Lessons

Note: These INSERT statements are different than the ones used in course 2 so you should recreate and repopulate the tables even if you used the store sales tables in module 5 of course 2. The store sales tables are used in the lecture notes and practice problems in modules 2 to 4. The SSSales table has 192 rows for course 3 while it only had 96 rows for course 2.

Here is the document for the CREATE TABLE and INSERT statements for the store sales database:

SalesDWStatements.txt

Mark as completed
